

# Micro Focus and SUSE Product list

Including all brands known as Attachmate, Borland, GWAVA, HP Enterprise Software, NetIQ, Novell, Serena, SUSE and Micro Focus

The following document contains all products available as listed on the Micro Focus website ([www.microfocus.com](http://www.microfocus.com)). This is on a high-level description basis and is categorised into solution sets.

- **Analytics and Big Data**
  - Our big data and analytics software lets you securely store, explore, and analyze all data types at unlimited scale.
- **Application Dev, Test & Delivery**
  - Accelerated delivery. Continuous quality. Build, test, and deliver innovative software faster with less risk.
- **Business Continuity**
  - Always protected, always available—without the complexity and cost
- **COBOL**
  - Start a new era of innovation. Innovate faster and with less risk
- **Collaboration**
  - Build a productive, mobile workforce
- **Information Management & Governance**
  - Trusted, proven legal, compliance and privacy solutions
- **IT Operations Management**
  - Accelerate your IT Operations to the speed of DevOps
- **Mainframe**
  - Modernize mainframe applications and data access using new tools and DevOps practices
- **Security**
  - Security at the core to everything you do; Operations, Applications, Identity and Data

## Legend:

**Heritage Micro Focus**; **Heritage HPE Software**; **SUSE**

## **Access Manager**

Provides single sign-on for enterprises and federation for cloud applications

## **AccuRev**

An application lifecycle solution that unleashes the power of development teams

## **Acu-4GL**

Transparent access from ACUCOBOL-GT to Relational Database Management Systems

## **Acu-XDBC**

A data management system for Vision files

## **AcuToWeb**

Transforms your ACUCOBL-GT to deliver a powerful end user experience across devices

## **Adaptive Backup & Recovery Suite**

Predictive data protection solution across hybrid IT environment

## **Advanced Authentication**

Move beyond username and passwords and securely protect data and applications

## **Agile Manager**

Agile project management solution to plan, execute and track Agile projects

## **ALM**

Lifecycle management solution to deliver software at speed with quality

## **ALM Octane**

Lifecycle management for any methodology to deliver software at speed with quality

## **App Release Automation (CODAR)**

Continuous deployment solution providing automation and release management

## **Application Defender**

Cloud-based app protection delivers continuous vulnerability detection at the enterprise security level.

## **Application Performance Management**

End to end solution for application performance management

## **AppManager**

Monitor apps, systems, and networks for better visibility and IT service delivery

## **AppPulse**

Accelerate app delivery by isolating experience issues down to the line of code.

## **AppPulse Active**

Monitor websites, cloud, and SaaS services instantly from the perspective of your end-user.

## **AppPulse Mobile**

Monitor all aspects of your mobile app's user experience with actionable metrics on UI performance, stability, and more.

## **AppPulse Trace**

Provides end to end application monitoring behind the firewall or in the cloud to let you find performance problems before your users do.

## **AppPulse Web**

HPE AppPulse Web is a web application performance monitoring solution that tracks the real user experience of your web applications.

## **ArcSight Activate Framework**

HPE Security ArcSight ESM is a comprehensive security information and event management solution that identifies and prioritize threats in real time so you can respond and remediate quickly.

## **ArcSight Data Platform**

A future-ready, open platform that transforms data chaos into security insight

## **ArcSight ESM**

A comprehensive threat detection, analysis, and compliance management SIEM solution

## **ArcSight Express**

This SIEM appliance gives you the insight and tools to identify and prioritize current and potential threats so you can optimize your response and improve the security of your systems.

## **ArcSight Investigate**

An intuitive hunt and investigation solution that decreases security incidents

## **ArcSight Marketplace**

Download and deploy pre-packaged content to dramatically save time and management

## **ArcSight User Behavior Analytics (UBA)**

Detect unknown threats through real-time analytics

## **Artix**

An ESB that deploys service-oriented architecture without a centralized hub

## **Asset Manager**

Manage hardware and software assets across procurement, lifecycle, and disposal

## **Atalla HSM**

FIPS 140-2 Level 3 hardware cryptographic appliance to meet compliance standards

## **Atlas**

A collaborative, flexible, Agile requirements and delivery platform

## **Backup Navigator**

Advanced analytics and reporting application for Data Protector environments

## **Business Continuity Clustering (OES)**

Protects your key business systems against downtime and disaster

## **Business Process Monitor**

Proactively monitors processes to find performance issues before they affect users

## **Business Process Testing**

A component-based test framework that accelerates functional test automation

## **Business Rules Manager**

Find hidden logic within portfolios and extend their value through re-use

## **Business Value Dashboard**

Dashboards to represent IT's value by bringing business intelligence to IT data

## **Change Guardian**

Protect critical data, reduce risk and manage change with Change Guardian

## **ChangeMan SSM**

Detects changes, synchronizes multiple environments, and restores failed systems

## **Cloud Migration (Platespin)**

Anywhere-to-anywhere server migration—on time, at low risk, and within budget

## **Cloud Optimizer**

Comprehensive capacity planning and management with performance monitoring

## **Cloud Service Automation**

Automate and simplify deployment and management of hybrid IT services

## **Cluster Services (OES)**

Simplifies resource management on a Storage Area Network and increases availability

## **COBOL Analyzer**

A code analysis and visualization tool that provides full oversight of code changes

## **Comparex**

Mainframe comparison tool that supports data, text, and directory files

## **Configuration Management System**

Collects, stores, manages, updates, and shows data on infrastructure configuration

## **Connected Backup**

PC backup solution for data stored on end-user computers

## **Connected MX**

Cloud based endpoint backup solution with file sync and share, and analytics

## **Content Manager**

Policy-based governance (ECM) software to meet regulatory and privacy requirements

## **ControlPoint**

File analysis to discover, classify and automate policy on unstructured data

## **Data Protector**

Protect data in your physical and virtual environments, supported by real-time analytics and guided optimization.

## **Database and Middleware Automation**

Automate database and application middleware lifecycle management

## **Database and Middleware Automation**

Automates provisioning, configuration, patching, upgrades and other lifecycle operations for databases and middleware.

## **Database Connectors**

Store data within an RDBMS without changing application source code

## **Databridge**

An ETL solution that replicates Unisys MCP DMSII data into a database in real time

## **Deployment Automation**

Connect Dev and Ops by automating the deployment pipeline and reduce feedback time

## **DevInspect**

Provides immediate feedback to the developer to eliminate security vulnerabilities as the application is written - for secure code development.

## **Diagnostics**

Detect, triage, and isolate performance issues from user action to line of code

## Digital Safe

Cloud-based, scalable archiving for regulatory, legal, and investigative needs

## Dimensions CM

Change and configuration management that streamlines development to release faster

## Dimensions RM

Requirements management solution that provides end-to-end traceability of processes

## Directory and Resource Administrator

Limits administrative privileges and restricts directory views to specific users

## eDiscovery

Respond to litigation and investigations quickly, accurately, & cost-effectively

## Enterprise Analyzer

Intelligence and analysis technology that provides insight into core processes

## Enterprise Developer

A development environment that streamlines mainframe COBOL and PL/I activities

## Enterprise Developer Connect

Use modern and productive tools to develop applications directly on the mainframe

## Enterprise Developer for z

Easily maintain and modernize z Systems applications

## Enterprise Messaging

Provides email, instant messaging, and collaboration for your enterprise, while also managing security, archiving, and recovery.

## Enterprise Secure Key Manager

Automated encryption key lifecycle management appliance

## Enterprise Server for .NET

Deploy IBM mainframe application workloads to the Microsoft .NET framework

## Enterprise Sync

Enable faster, efficient parallel development at scale

## Enterprise Test Server

Enable IT teams to easily test mainframe application changes on scalable hardware

## Enterprise Viewer

Capture, analyze, and measure the value, cost and risk of application portfolios

## **Exchange Administrator**

Provides Exchange administration that restricts privileges to specific users

## **File Management Suite**

File Reporter and Storage Manager solution suite bundle

## **Filr**

Provides secure file access and sharing from any device

## **Fortify on Demand**

Application Security as a managed service

## **Fortify Software Security Center**

Gain valuable insight with a centralized management repository for scan results

## **Fortify Static Code Analyzer**

Identifies security vulnerabilities in software throughout development

## **Fortify WebInspect**

Provides comprehensive dynamic analysis of complex web applications and services

## **Group Policy Administrator**

Edit, test and review Group Policy Object changes before implementation

## **GroupWise**

Provides secure email, calendaring, and task management for today's mobile world

## **GroupWise Disaster Recovery (Reload)**

Backup and disaster recovery solution that ensures critical data is always available

## **GroupWise Forensics**

Monitoring, auditing, and email policy enforcement for GroupWise

## **GroupWise Mailbox Management**

Enterprise mailbox management for GroupWise

## **GroupWise Reporting & Monitoring**

Comprehensive, customizable, monitoring and reporting solution for GroupWise email

## **Host Access Management and Security Server**

Integrate the host with your modern security framework

## **HPE Connectors**

Data aggregation and indexing technology that connects to virtually all systems – enterprise and the cloud – regardless of file type or language.

## **Identity Governance**

Provides automated user access review and recertification to remain compliant

## **Identity Manager**

Delivers an intelligent identity management framework to service your enterprise

## **IDOL**

Securely access and analyze enterprise (and public) text, audio & video data

## **InfoConnect**

Desktop terminal access modernization of Unisys mainframe applications

## **Investigative Analytics**

Enables organizations to detect patterns, surface anomalies, and highlight trends to proactively identify and investigate risk events and related non-compliant, fraudulent actions and behavior.

## **IT Service Management Automation Suite**

Intelligent automation for service desk, configuration, and asset management

## **KeyView**

File filtering and transformation software that extracts text, metadata, and other relevant properties from over 1,000 file formats on numerous platforms.

## **LeanFT**

A powerful, lightweight testing solution for continuous integration and testing

## **Legal Hold**

Apply, enforce and manage information legal holds for litigation and investigations

## **LoadRunner**

Powerful load testing for end-to-end view of application and system performance

## **MF Connect**

Achieve full transparency across a multitude of tools and systems

## **Micro Focus Desktop Containers**

Package, test, and deploy containerized Windows apps quickly and easily

## **Micro Focus File Reporter**

Discover what is being stored and who has access

## **Micro Focus iPrint**

Print across the enterprise and platforms from any device

## **Micro Focus Storage Manager**

Provides automated management of file storage for users and work groups

## **Mobile Center**

A lab of real devices to help you build an app experience from real-world insights

## **Mobile Management**

Secure and manage mobile devices your users want to work on—even personal devices

## **Net Express/Server Express**

Development environments for COBOL that enable developers to produce enterprise apps

## **Network Automation**

Drive automated configuration, change, and security compliance across your network

## **Network Node Manager i**

Unifies fault, availability, and network performance monitoring for devices

## **Network Virtualization**

Run tests with real-world network conditions to detect issues before deployment

## **Open Enterprise Server**

Secure enterprise file, print, and storage services for mixed IT environments

## **Open Workgroup Suite**

Seven essential tools to build IT infrastructures, including secure file sharing

## **OpenFusion**

A comprehensive suite of CORBA products

## **Operations Analytics**

An IT reporting solution that gives you the IT management data you need to perform inference-driven forecasting, regardless of IT resource allocation and configuration changes.

## **Operations Bridge Analytics**

An operational intelligence solution that leverages data to help identify insights

## **Operations Bridge Reporter**

Provides IT management data needed to perform inference-driven forecasting

## **Operations Bridge Suite**

Autonomous operations through a business lens

## **Operations Center**

A service management solution that delivers a holistic view of mixed IT environment

## **Operations Manager**

Infrastructure monitoring software that proactively performs root cause analysis to help you reduce the time to repair and the cost of operations management.

## **Operations Manager i**

Dynamic monitoring, root-cause analysis, and automated remediation

## **Operations Orchestration**

Orchestrate tasks across complex IT processes with a single action

## **Operations Smart Plug-ins**

Application monitoring software that gives you better database, service, and application performance intelligence.

## **Orbacus**

Provides highly embeddable CORBA ORB as source code for mission-critical systems

## **Orbix**

Enterprise CORBA technology for distribution at scale

## **Orbix Mainframe**

Offers application development tools that make integrating mainframe systems easy

## **Performance Center**

Cross-enterprise performance testing for multiple and concurrent testing projects

## **Performance Manager**

System performance monitoring software with real-time performance dashboards that reduces MTTR across IT application infrastructure.

## **PlateSpin Forge**

Provides cost-effective, all-in-one disaster recovery through a hardware appliance

## **PlateSpin Protect**

Disaster recovery that uses virtual infrastructure capacity to protect servers

## **Predictive ALM**

Optimize quality application delivery with prescriptive guidance.

## **Privilege Access Management**

Enables IT administrators to work on systems without exposing credentials

## **Project and Portfolio Management**

Standardize and manage project and portfolio activities for real-time decisions

## **PVCS**

Integrated version, issue, and defect management to increase productivity

## **Quality Center Enterprise**

Unified, comprehensive, and extensible application software quality platform

## **Quality Center Express**

The industry's leading test management solution helps teams release the highest quality applications and better understand the impact of change.

## **Real User Monitoring (RUM)**

Real user monitoring to detect, triage, and isolate end user performance issues in production

## **Reflection**

Desktop, mobile, and cloud terminal modernization of IBM, HP, and UNIX mainframe applications

## **Reflection for Secure IT**

The full solution for secure automated file transfer management inside and across perimeters

## **Reflection Mobile**

Run terminal emulation apps on your mobile device

## **Reflection ZFE**

A zero-footprint terminal emulator that provides HTML5 access to applications

## **Relativity**

Make COBOL data contained within COBOL data files available to any reporting tool

## **Release Control**

Centralized planning and control for the entire software release lifecycle

## **Requirements Management**

A comprehensive requirements management software solution that defines, manages, and tracks software requirements.

## **Retain Unified Archiving**

Archive all business communication for case assessment, search, and eDiscovery

## **Rhythm**

Ensures Agile project success with effortless Agile planning and tracking

## **Rich Media Analytics**

Media analytics software that helps organizations increase their ROI on Big Data by providing easy access, comprehensive analysis, streamlined management and intuitive visualization of rich media.

## **RM/COBOL**

Provides a familiar environment to maintain and improve apps written in RM/COBOL

## **Rumba**

Desktop terminal access modernization of IBM, HP, UNIX mainframe applications

## **Secure Configuration Manager**

Finds and repairs configuration errors that lead to security breaches or downtime

## **Secure Gateway (GWAVA)**

Protect your network and messaging system from malware, viruses, and harmful content

## **Secure Login**

Streamlines authentication for enterprise apps with a single login experience

## **SecureData for Hadoop**

Data-centric approach to Big Data security while significantly reducing risk and scope of regulatory compliance audits.

## **SecureData for Mainframe**

A solution that provides data-centric protection from end-to-end

## **SecureData Mobile**

Mobile data security and encryption for mCommerce payment card data, Personally Identifiable Information (PII) and Personal Health Information (PHI).

## **SecureData Payments**

Secure payment solution for retail transactions that provides complete point-to-point encryption, tokenization and data security.

## **SecureData Web**

eCommerce security solution that protects online payments and data captured at the browser all the way to the point the customer enters their personal information.

## **Security Intelligence and Operations Consulting**

Consulting to help build and mature enterprise security operation capabilities

## **Security Solutions for IBM i**

Provides easy compliance auditing and real-time protection for IBM iSeries systems

## **Self Service Password Reset**

Enables users to reset their passwords without the help of IT

## **Sentinel**

A fully-featured, adaptable solution that simplifies the day-to-day use of SIEM

## **Server Automation**

Automate server lifecycle management across heterogeneous server environments

## **Service Desk**

Streamlines and automates the way you provide IT services to your business

## **Service Level Management**

IT service level management software that helps you define, track, and report on service levels from a business perspective.

## **Service Level Manager**

Define, track, and report on service levels from a business perspective

## **Service Manager**

Software for service desk and help desk management that quickly handles change

## **Service Request Center**

Creates a centralized request center that serves as the storefront of IT

## **Service Support Manager**

Helps business and IT work together via a process-based approach to IT management

## **Service Support Manager (SSM)**

Helps business and IT work together via a process-based approach to IT management

## **Service Virtualization**

Dev and test faster with app simulation software that simulates service behavior

## **Silk Central**

Gain control across all areas of software testing, no matter your methodology

## **Silk Mobile**

Automated functional mobile testing that replicates end user experience

## **Silk Performance Manager**

Synthetic transaction monitoring solution assesses app performance in production

## **Silk Performer**

Automated software load, stress, and performance testing in an open, sharable model.

## **Silk Test**

Automated functional and regression testing for enterprise software applications

## **Silk WebDriver**

Easily record, run, and export Selenium scripts with Silk WebDriver

## **SiteScope**

Agentless, easy to use system monitoring

## **Solutions Business Manager**

Orchestrates and integrates processes for faster software development and delivery

## **Sprinter**

A manual software testing solution that streamlines and speeds Agile testing.

## **Sprinter**

HP Sprinter provides a suite of advanced features and tools that make manual testing more efficient and effective.

## **StarTeam**

An integrated, cost-effective software change and configuration management tool

## **StarTool FDM**

An environment that manages mainframe files for fast problem resolution

## **Storage Optimizer**

A data storage optimization solution that lets you intelligently manage unstructured data and distribute information across multiple storage repositories, including the cloud.

## **StormRunner Functional**

Coming Soon - A High availability solution that enables developers & testers to smartly test their web and mobile applications with optimized ROI.

## **StormRunner Load**

Simple and scalable SaaS delivered performance testing solution

## **Structured Data Manager**

Structured data archiving to retire outdated applications and reduce data footprint

## **Supervisor**

Software that automates the monitoring of employee communications to meet regulatory, compliance, and internal risk-mitigation initiatives.

## **Systems Management**

Consolidate data across environments to reduce repair time and improve efficiency

## **Unified Functional Testing (UFT)**

Make automated testing more efficient and help developers and testers collaborate

## **Verastream**

Fuel mobile apps, cloud initiatives, process automation, and more

## **Vertica**

Monetize all of your data at massive scale with real-time analytics. Manage rapidly growing volumes of data and provide fast query performance.

## **Vibe**

Provides secure team collaboration with document management and workflow features

## **VisiBroker**

Develop and deploy distributed applications with these CORBA solutions

## **Vivinet Assessor**

Predict overall call quality and efficiently identify where upgrades are needed

## **Vivinet Diagnostics**

A VoIP troubleshooting tool that identifies and explains call quality problems

## **VM Explorer**

VM backup and replication for VMware vSphere and Microsoft Hyper-V environments

## **VoIP Management**

Assess, diagnose, monitor, and manage UC/VoIP implementation for better service

## **Voltage SecureData**

Format-preserving encryption, tokenization, data masking, and key management

## **Voltage SecureMail**

Scalable, end-to-end encrypted email solution for desktop, cloud, and mobile

## **ZENworks Asset Management**

Provides reports that integrate licensing, installation, and usage data

## **ZENworks Configuration Management**

Provides automated endpoint management, software distribution, support, and more

## **ZENworks Endpoint Security Management**

Identity-based protection for devices that features total protection

## **ZENworks Full Disk Encryption**

Protects the data on laptops and desktops with push-button ease

## **ZENworks Mobile Workspace**

Enables secure access to corporate data through users' mobile devices

## **ZENworks Patch Management**

Automates patch assessment and monitors compliance for security vulnerabilities

## **ZENworks Suite**

Seven integrated products to help track, manage, and protect endpoint devices

## **Maintenance and Support**

Our Maintenance and Support Plans provide the software updates and technical support you need to maintain a stable, optimized environment, minimize risk, and maximize the return on your investment. Let us help you keep your technology current and your solutions running smoothly. This includes Software Updates and Technical Support

### **Software Support**

24 hour access to Software Engineers who will help diagnose, advise and resolve issues. Also includes access to Software Updates and Knowledge Base – all this is made available through “Software Support Online” Platform. Additional enhanced and value-add portfolio offering is available and designed to complement the entire software support experience.

## **SUSE Linux Enterprise Server**

SUSE Linux Enterprise Server is a highly reliable, scalable and secure server operating system, built to power physical, virtual and cloud-based mission-critical workloads

## **SUSE Linux Enterprise Server for SAP Applications**

SUSE Linux Enterprise Server for SAP Applications is a reliable, manageable and highly available platform optimized for all SAP mission-critical workloads, supporting SAP hardware and soft-ware appliance-based deployments.

## **SUSE Linux Enterprise Server for System z**

A Linux operating system optimized for the mainframe, SUSE Linux Enterprise Server for System z provides an alternative to x86 platforms for virtualizing distributed workloads or a cost effective solution for adding new workloads to your existing mainframe.

## **SUSE Linux Enterprise Server with Expanded Support**

SUSE Linux Enterprise Server with Expanded Support is a premier support subscription that includes support, patches and updates for other existing Linux platforms, such as Red Hat.

Customers benefit from a single point of contact for servicing and supporting their heterogeneous Linux environment

## **SUSE Linux Enterprise Server for IBM Power**

With SUSE Linux Enterprise Server on IBM Power Systems, you gain the next generation of enterprise Linux operating system and IBM hardware, optimized for superior reliability and performance and the flexibility to run the most demanding business-critical workloads

## **SUSE Linux Enterprise Live Patching**

SUSE Linux Enterprise Live Patching provides a stream of pack-ages to update a running kernel without interruption. This subscription offering from SUSE is based on the kGraft project

## **SUSE Linux Enterprise Point of Service**

SUSE Linux Enterprise Point of Service is the only enterprise class Linux operating system tailored specifically to the unique needs of the retail industry. It provides a reliable, flexible and open platform for point of sale terminals, kiosks, self-service and reverse-vending systems and includes a version of Linux tailored for user touch points and in-store servers

## **SUSE Linux Enterprise High Availability Extension**

SUSE Linux Enterprise High Availability Extension is an affordable, integrated suite of robust open source clustering technologies that enables enterprises to implement highly available physical and virtual Linux clusters.

## **Geo Clustering for SUSE Linux Enterprise High Availability Extension**

When you need maximum protection for a workload that can never have unplanned downtime, and you have data centers in different places around the globe, Geo Clustering for SUSE Linux Enterprise High Availability Extension is the answer.

## **SUSE Linux Enterprise Real Time Extension**

SUSE Linux Enterprise Real Time Extension, an add-on to SUSE Linux Enterprise Server, turns the general purpose operating system into a fully supported, real-time operating system.

## **SUSE OpenStack Cloud**

Built for today's enterprise, SUSE OpenStack Cloud is an automated cloud computing platform that enables IT organizations to rapidly deploy and easily manage Infrastructure-as-a-Service private clouds.

## **SUSE Manager**

Built for Linux, SUSE Manager is a best-in-class server management tool with time-saving capabilities such as automated software management, system provisioning and monitoring.

It enables you/your enterprise to easily manage Linux server deployments across physical, virtual and cloud environments.

## **SUSE Studio**

SUSE Studio is a web-based tool that simplifies software deployments in physical, virtual and cloud environments, allowing you build your workloads within a couple of minutes. It lets you track and reapply any changes automatically in a reproducible way, offering the compliance and control you require. SUSE Studio saves time by automating the image or workload creation process and avoiding manual errors that might be introduced from repetitive human interaction.

## **SUSE Linux Enterprise Desktop**

SUSE Linux Enterprise Desktop is the market's only enterprise-quality Linux desktop. It delivers a tightly integrated, all-in-one set of applications including a high-powered office suite, a secure web browser, time-saving email and instant messaging client. It also offers integrated multimedia support, multimedia management and photo management.

## **SUSE Enterprise Storage**

SUSE Enterprise Storage, powered by Ceph, is a highly scalable and resilient software-based storage solution, which enables you to build cost-efficient and highly scalable storage using commodity off-the-shelf servers and disk drives. It is a self-healing and self-managing solution that delivers storage functionality comparable to mid- and high-end storage products at a fraction of the cost. It also scales from a terabyte to a multi-petabyte storage network.

## **SUSE Linux Enterprise Virtual Machine Driver Pack**

SUSE Linux Enterprise Virtual Machine Driver Pack is a fee-based bundle of paravirtualized network, bus and block device drivers that allows you to run fully virtualized Windows workloads on SUSE Linux Enterprise Server with near-native performance. It accelerates network and storage input/output and improves overall efficiency by opening additional channels of communication between either the Xen or KVM hypervisor, both of which are included in SUSE Linux Enterprise Server.

## **Long Term Service Pack Support**

Long Term Service Pack Support is a service option that enables your enterprise to extend the life cycle of each major version of SUSE Linux Enterprise Server by expanding traditional seven year coverage up to a total of ten years.

## **SUSE Linux Enterprise Workstation Extension**

Save time and improve code quality with SUSE Linux Enterprise Workstation Extension. Turn SUSE Linux Enterprise Server into a fully-featured development or administrator workstation environment with this new extension from SUSE
